

# TAXLATOR BACKEND API DOCUMENTATION

This document contains all available backend API endpoints for the Taxlator project.

---

## BASE URL

<https://gov-taxlator-api.onrender.com>

## API DOCUMENTATION

[https://gov-taxlator-api.onrender.com/docs/API\\_DOCUMENTATION.pdf](https://gov-taxlator-api.onrender.com/docs/API_DOCUMENTATION.pdf)

---

## HEALTH CHECK

Used to confirm that the backend service is running.

Method	Endpoint	Description
GET	/health	Confirms the API is live

---

## AUTHENTICATION ENDPOINTS

### SIGNUP

Register a new user. A 6-digit verification code is sent to the user's email. Users must verify their email before calculation records can be saved.

Method	Endpoint	Description
POST	/api/auth/signup	Create a new user

---

### VERIFY EMAIL

Verify a user's email using the code sent at signup.

Method	Endpoint	Description
POST	/api/auth/verifyEmail	Verify email with code

---

### SIGNIN

Authenticate an existing verified user and return a JWT. Only verified users can sign in successfully.

Method	Endpoint	Description
POST	/api/auth/signin	Sign in an existing user

---

### SEND VERIFICATION CODE

Send a new verification code if the previous one expired or was lost.

Method	Endpoint	Description
POST	/api/auth/sendVerificationCode	Send verification code

---

## SIGNOUT

Clear authentication cookie and logout.

Method	Endpoint	Description
GET/POST	/api/auth/signout	Signout user

---

## CALCULATION ENDPOINTS 💰

Both Tax and VAT endpoints are dual-purpose:

1. Public users can calculate without signing up (records will not be saved).
2. Verified users can calculate and their results will be saved to their history.

## TAX

Method	Endpoint	Description	Note
POST	/api/tax/calculate	Calculator endpoint	if user is valid, record is saved

---

## VAT

Method	Endpoint	Description	Note
POST	/api/vat/calculate	Calculator endpoint	if user is valid, record is saved

---

## STATUS CODES ⚠

- 400 – Bad request / validation error
- 401 – Unauthorized / invalid token
- 403 – Forbidden / email not verified
- 404 – Resource not found
- 500 – Server error
